The committee's decision to focus on the development of the Library, Archive, and Research Tools is based on a comprehensive review of the existing resources and the identified needs of the community. The primary objectives are to enhance the accessibility and usability of the collection, improve the user experience, and facilitate research and scholarly activities. The decision was influenced by the current technological landscape and the need for innovation in library services.

To achieve these objectives, the committee recommends the following actions:

1. **Resource Allocation**: Increase the budget for acquiring and maintaining digital resources, focusing on open-access materials and ensuring a diverse range of content.
2. **User Interface**: Develop a user-friendly interface that allows for easy navigation and search capabilities.
3. **Collaboration**: Foster partnerships with other libraries and archives to share resources and expertise.
4. **Training and Support**: Provide training for staff and users on how to effectively utilize the new tools and resources.
5. **Feedback Mechanism**: Establish a system for collecting user feedback to continually improve the services.

The committee acknowledges the challenges ahead, including the need for ongoing investment in technology and infrastructure, but is encouraged by the potential for transformation and innovation. The ultimate goal is to create a library that not only serves the current needs but also anticipates future demands in the field of information management and research.
